<b>Oferowane stanowisko</b>	
Nazwa stanowiska	FRONT END DEVELOPER

Zakres obowiązków

**Company Description:**  
Dots+Circles develop bespoke digital resources and online marketing campaigns supported by design and technology. We are a growing business in an exciting industry, looking for the best people to grow with us and help define our future. We work with a wide range of organisations from sole traders and medium businesses to start-up ventures, non-profits and academic institutions. Our mission is to inspire and take ideas on unexpected journeys, exploring new directions and possibilities in design and web technology. This role has been created following a significant recent expansion of our client base and company's strategic decision to open a new studio in Poland. The role presents you with an opportunity to test your knowledge, experience and innovative approaches to stimulating projects within a dynamic dev team.

**Position Outline:**  
We are looking to hire a full-time front-end developer in our newly opened office in Silesia, Poland. You will be actively learning from senior team members and quickly apply new techniques to your code. You are expected to have fluency in working with HTML and CSS, besides knowing and having experience with the most popular preprocessors. You should know how to effectively use JavaScript libraries and be ready to bring SPA frameworks into your workflow (Angular.js). You must be familiar with Object Oriented Programming. You will naturally use the best markup techniques and apply them to SEO guidelines. You will be working in Agile methodologies, thus you must know how to estimate your own work, assess risks and keep deadlines. You must be well organised and be used to documenting your code as well as report the progress of your work. Above all, you must be technically curious, like challenges and have a good eye for spotting design flaws and loopholes.

**Note:** Well-qualified candidates who'd rather work flexible hours, or as collaborators might be considered. We are also willing to create a space in our office for those talented individuals that are looking to gain further experience while working on challenging projects.

- Requirements/Qualifications:**
- Fluency in Javascript, HTML, CSS
  - Ability to write clean, reusable code
  - Working knowledge of one general-purpose programming language (Ruby, Python, PHP, etc)
  - Experience with Javascript frameworks, such as JQuery
  - Some experience with SPA frameworks preferably Angular 2
  - Experience with version control tools, such as GIT
  - Experience with object oriented programming
  - Basic understanding of Agile methods and TDD
  - Skills and experience in setting up a development environment
  - Knowledge of responsive and adaptable design translated into fluid, responsive templates
  - Decent English skills in writing and communication
  - Good eye for User Experience
  - Ability to translate PSD to HTML/CSS

- Candidate's specification:**
- Focus on the end user through efficient and accessible code
  - Curiosity and willingness to learn and pursue technical capabilities
  - Proactive, yet pragmatic attitude
  - Inventive and unorthodox thinking
  - Ability to communicate your ideas and solutions to other team members
  - Sound understanding of digital industries and effective working methods
  - Passionate about working in cross-disciplinary environment
  - Strong work ethic
